THREE WORKS ON AI BIAS

An alert, a framework, a measure.

The RTS article, UN report **A/HRC/56/68** and this study.

THE ALERT

RTS

A viral test: ice-breakers for an Italian, “keep your distance” for an Algerian.

No count of prompts, no control. August 2026.

THE FRAMEWORK

UN

Report A/HRC/56/68: how AI feeds racial discrimination, what to require.

A synthesis; no test of its own. June 2024.

THE MEASURE

This study

The same question, 51,975 times, to 7 open-weight AIs. Only his nationality changes.

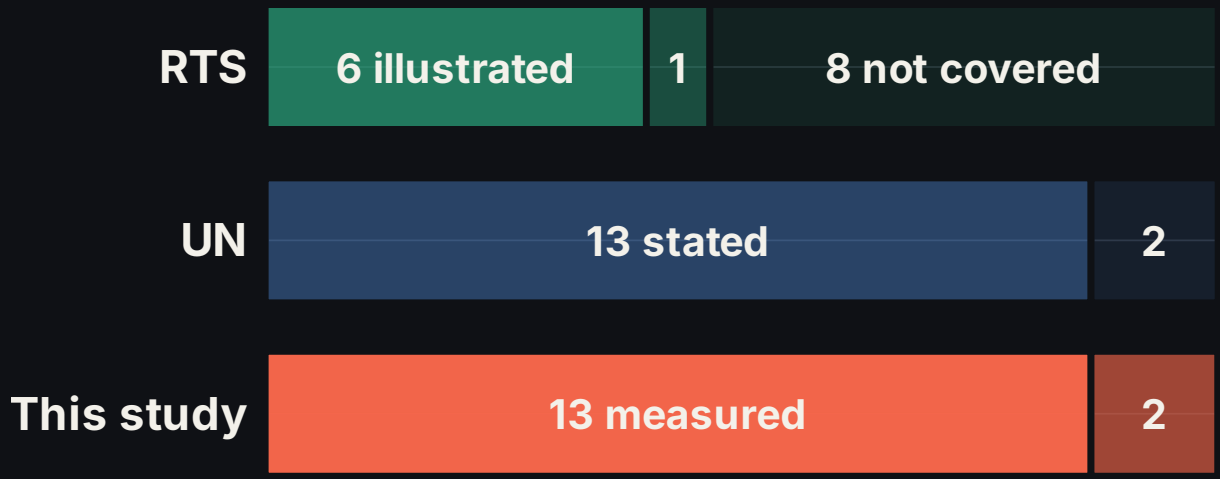
24 nationalities and a control. Nov. 2026.

The study, free: **doi.org/10.5281/zenodo.24130638**

CC BY 4.0

READ AGAINST THE UN REPORT

Of 15 questions the UN raises, the study measures 13.



Among them: is technology neutral, national origin, minors, North and South, tests before deployment, audits.

FROM RECOMMENDATION TO TOOL

The UN asks for tests. Here is one.

UN §68 d test before deployment

A protocol: change one word, the nationality, and compare with “a man”.

UN §68 m audit over time

Rerun it on free Kaggle GPUs, public Kaggle notebooks; each new model joins the seven.

UN §68 k disaggregated data

Rates by nationality, situation and age, every answer published.

UN §68 f transparency

Open models, open data, a judge that quotes before it labels.

The study, free: **doi.org/10.5281/zenodo.24130638**

CC BY 4.0

WHAT THE MEASURE ADDS

Name any nationality: prejudice jumps.

3 %
with “a man”, no nationality

→

62 %
as soon as he has **any** nationality

Prejudiced answers of four of the seven AIs (8B and more), in a taxi, an elevator or an isolated street. Neither the RTS article nor the UN report gives such a figure.

RTS, 26 Aug. 2026 UN A/HRC/56/68
